How to Order

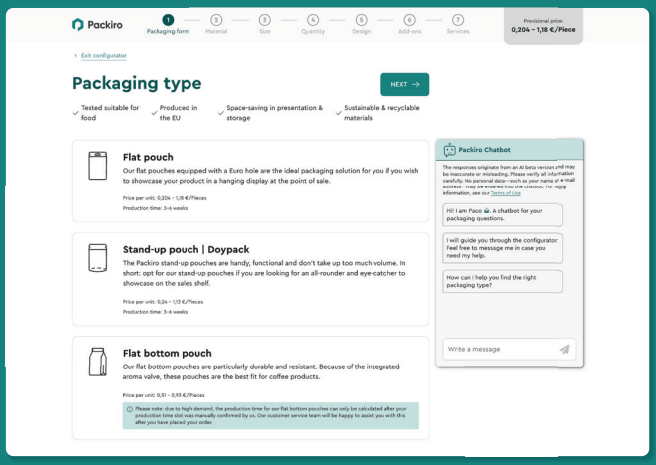

An Introduction to Using our Packaging Configurator

Overview

You can find all 7 steps of our configurator on top of the page. The current one is always highlighted. On their right, you can see a provisional price that changes depending on your selections. You can find a brief summary of your current configuration below the steps called „Your packaging".
If you need help, our AI powered chatbot will assist you at any time.

Step by Step

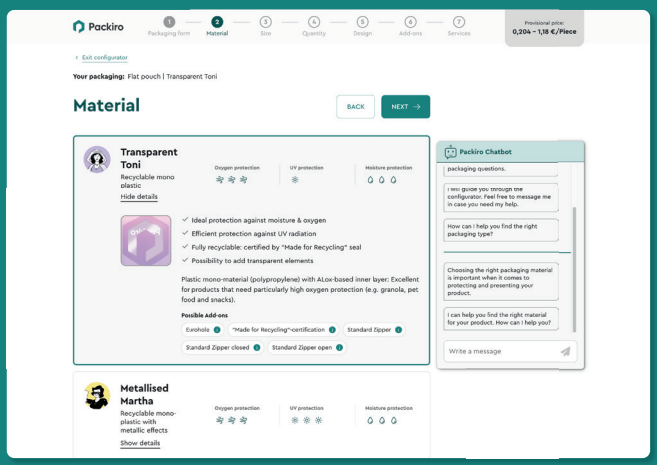

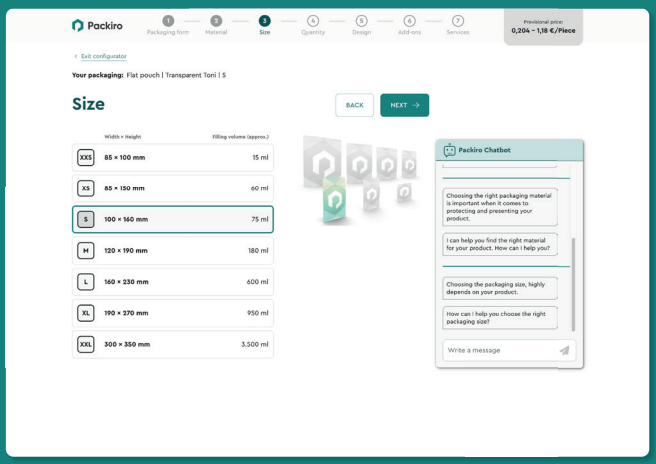

1. Packaging Type

Select one of our packaging types. You can find useful information about the unit price and production time for each option. The available materials and sizes in the following steps are depending on your selection.

2. Material

Our materials are made of recyclable mono-plastic or FSC®-certified paper. You can see their most important characteristics (oxygen protection, UV protection and moisture protection) next to their names. Select a material to find more details and a list of available add-ons.

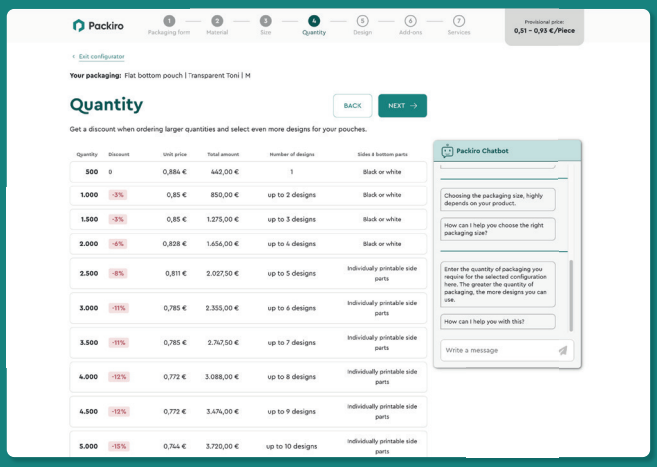

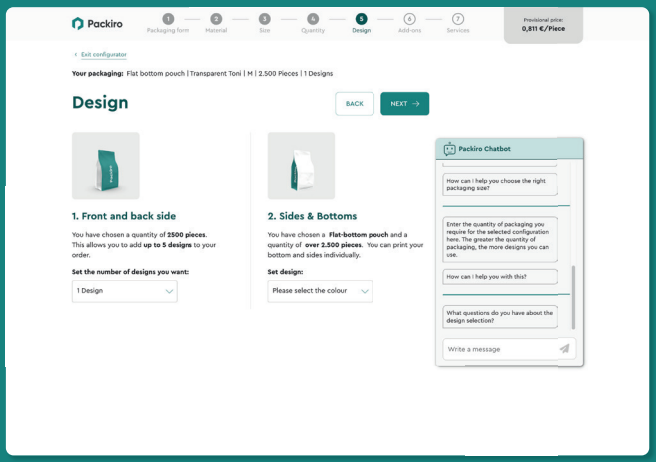

3. Size

Choose a size that suits your needs. Use the width and height or filling volume details to help you choose the right one.

4. Quantity

The greater the quantity you select, the higher the discount you will receive. The number of designs also varies depending on the quantity.
If you select a flat bottom pouch in step 1, the quantity will also determine the design of the side and bottom parts of the pouch. We currently offer black or white side parts for quantities of less than 2,500 pieces, or custom printable side parts for quantities of more than 2,500 pieces.

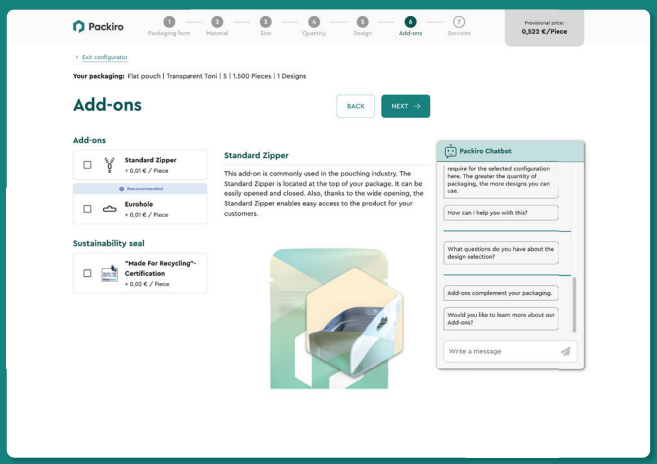

5. Design

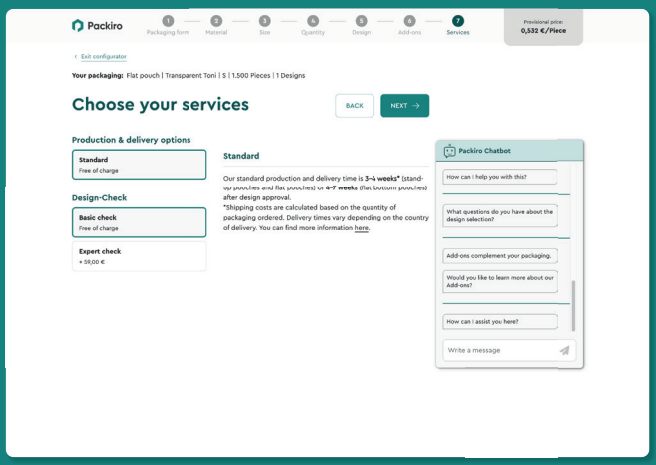

Depending on the quantity selected in the previous step, you can select the number of designs here. Each design comes with an additional charge.
If you have opted for a flat-bottom pouch, you can also choose the design for its bottom and side parts.

6. Add-ons

Your pouch can be enhanced by add-ons. The add-ons you can select from depend on the pouch type and material you selected earlier.
You can order your Zippers open or closed.
