Packiro

Start Production

How to approve your print with Packiro

Step by Step

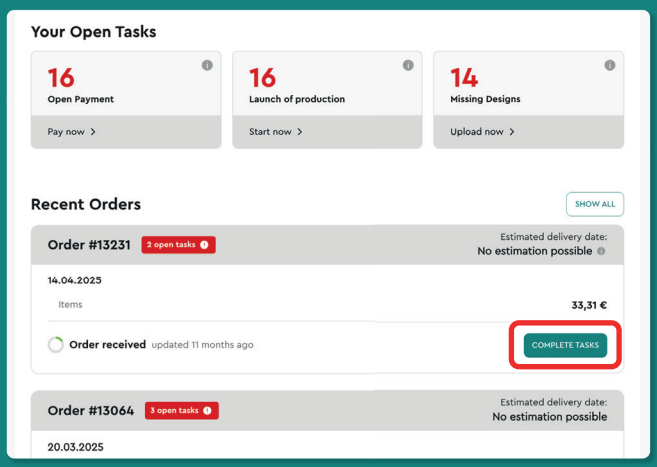

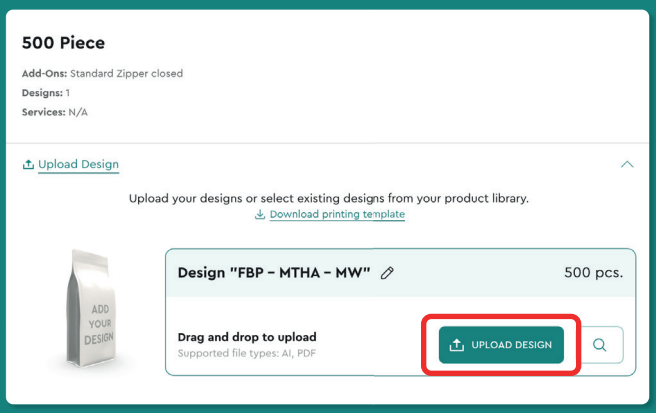

1. Sing in

Log in to your Packiro account by clicking on "Account" in the main navigation bar.

2. Select order

You can find your last 3 orders on the overview page of your Packiro account. Click on the "Complete tasks" button in your last order or navigate to the desired order via "Orders" and then select the appropriate one from the table.

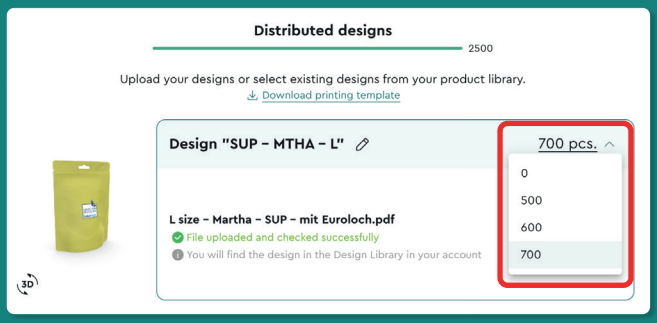

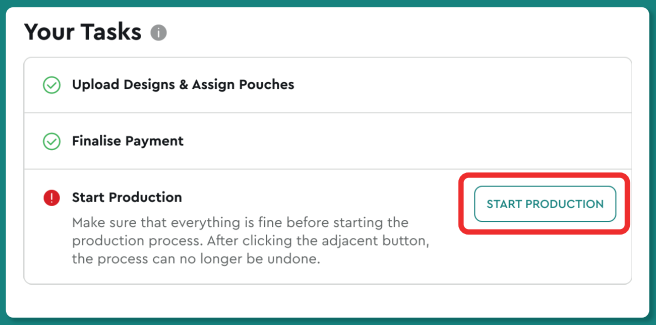

3. Upload designs

Scroll down to your ordered packaging. Click on the "Upload design" bar to view all designs. Then upload your designs using the "Upload design" button. If you have already uploaded all your designs, skip this step.

4. Assign quantities

If you have ordered multiple designs, you must now assign the desired quantity to each one. If you have already done this, skip this step.

5. Last check

Double-check that all designs are correct and the quantities are right. If everything is OK, scroll to the top of the page to your open tasks and the item "Start production".

Click on "Start production." This will approve your designs and allow us to begin production.

Our team will take care of everything, and you will be notified as soon as your order goes into production. If you have any questions, you can reach us at any time at info@packiro.com.
